Performance Testing

Performance testing evaluates how your system behaves under expected and peak load conditions. Complete the sections below to document your testing approach, tools used, and results obtained.

Step 1: Testing Overview

Field	Details
Testing Tool Used	Flask Development Server, Web Browser(Chrome), Postman
Type of Testing	Functional Testing, Intrgration Testing, system Testing
Target Module / API	Flood Psrediction Modue(/predict)/Flask Prediction Endpoint
Test Environment	Local Development Environment(windows, Python 3.10+, Flask)
Test Date	

Step 2: Test Scenarios

S.No	Test Scenario / Description	No. of Virtual Users	Duration (sec)	Expected Outcome
1				
2				
3				
4				

Step 3: Performance Test Results

S.No	Metric	Target Value	Actual Value	Status (Pass / Fail)	Remarks
1	Response Time (Avg)	< 2 seconds	3	fail	nill
2	Response Time (Max)	< 5 seconds	4	pass	nill
3	Throughput (Req/sec)				
4	Error Rate	< 1%	0	pass	nill
5	CPU Utilization	< 80%	60	pass	nill
6	Memory Utilization	< 80%	50	pass	nill

Step 4: Observations & Analysis

Key Findings:

[Describe what the test results revealed about your system's performance]

Bottlenecks Identified:

[List any performance bottlenecks observed during testing]

Optimization Steps Taken:

[Describe any changes or optimizations made to improve performance]

Step 5: Screenshots / Evidence

Attach screenshots of your performance testing tool results below (e.g., JMeter report, Locust graphs, k6 output):

[Insert Screenshot 1 here]

[Insert Screenshot 2 here]
