Empathy Map

Create an empathy map to understand your customer/user from four perspectives - what they Say, Think, Do, and Feel - in relation to the problem your project addresses. This helps the team build a customer-centric solution.

SAYS •I need accurate flood predictions before heavy rainfall •We must issue alerts as early as possible. •This tool should work quickly and accurately.	THINKS •Can this system provide reliable predictions in time? •Early warnings can reduce damage and save lives •Technology should support better disaster management
PERSONA NAME (Ro le / User Typ e)	
DOES •Monitors weather data and enters parameters into the application. •Analyzes prediction results and coordinates emergency response. •Shares alerts with authorities and the public.	FEELS •Concerned about public safety and protecting lives. •Responsible for minimizing risks during disasters. •Hopeful that AI can improve flood preparedness and response.
