Project Name	Rising Waters
Maximum Marks	2 Marks

Data Flow Diagram

Create a Data Flow Diagram (DFD) to show how data moves through your external entities, processes, and data stores. Use the symbols below.

DFD Symbols Legend

Symbols	Name	Description
Oval / Round shape	Receive Weather Data	This process collects the weather parameters entered by the user through the Flask web application. The system validates the input data before forwarding it for prediction.
Rectangle with numbered header	Data Pre-processing	The validated weather data undergoes preprocessing before prediction. This includes feature scaling, formatting, and transformation to match the format used during model training.
Rectangle (solid bottom)	Machine Learning Prediction	The processed data is sent to the trained Machine Learning model (Decision Tree, Random Forest, KNN).
Label arrow	Display Prediction	The prediction generated by the model is displayed on the web interface. The user receives an easy-to-understand prediction indicating whether flood.

Example

The diagram below will illustrate how the symbols above come together to form a diagram.

DATA FLOW DIAGRAM (DFD) – FLOOD PREDICTION SYSTEM

Rising Waters: A Machine Learning Approach to Flood Prediction
